

Load Cell Central

1-800-LOADCEL

----- FOR IMMEDIATE RELEASE -----

MARINE LOAD CELL ENHANCES WIRE ROPE SAFETY

Load Cell Central's UWTL Series underwater load cells eliminate dangerous guessing of cable loads in marine operations. For up to 5,000 meter depths and beyond, the UWTL is engineered for undersea conditions and is in use in a wide range of applications including marine towing, oilfield, salvage, construction, and mooring-load monitoring. These welded, hermetically sealed, stainless steel load cells incorporate SEA CON® sub-sea electrical connectors, and are built to order to meet customer requirements including special dimensions, cable length, millivolt per volt, and internal signal conditioner outputs. Load pins and other configurations are available. Options include signal telemetry systems (acoustic modems), custom software for center of gravity calculation, data collection, and limit alarms.

Complete, custom-engineered weighing systems and 24 hour technical support.

Load Cell Central, Box 91, Monroeton, PA 18832; <http://www.800loadcel.com>
