# EZ Link Windows Software

The EZ LINK is a windows software program. EZ LINK enables you to perform all configurations and application programming on your computer. Connect a serial port from your computer to a LCC 400 Series indicator, then all the powerful features of EZ LINK are at your fingertips. You now may perform the following on the computer, then upload it into an LCC 400 Series indicator: Configure the scale parameters, I/O ports, print formats, passwords, setpoints, event monitors, timers and scale basic.

The LCC 400 Series indicators can download their configuration data to the EZ Link as well, This feature will save any configurations that were changed using the keyboard.

The LCC 400 Series are programmable scale indicators. You may program the indicators to implement different applications by applying Scale Basic and Event Monitors. The Scale Basic / Event Monitor concept is called "event driven programming". The EZ Link program includes an editor where the program can be written. In addition, after the program is written, the scale basic compiler will check the program for errors. In an error has been detected, the compiler will point to the place in the program where the error occurred.
