## INTRODUCTION

The LBI digital Indicator is a general purpose, industrial grade weight indicator. One model is currently available, characterized by display type, enclosure type and power supply. Table 1 shows the LBI product details.

This model can readout up to 50,000 display divisions and can supply enough current for up to  $4-350\Omega$  load cells. All setup parameters may be entered via the front panel keys, including calibration.

If your model LBI digital Indicator is part of a complete floor scale or has already been installed for you, you may skip to the operating instructions. Prior to using the indicator, please read this chapter carefully and completely. Store the manual in a safe and convenient place so it will be available if you have questions concerning the operation of the scale.

MODEL	DISPLAY TYPE	ENCLOSURE TYPE	POWER SOURCE
LBI	LCD	Mild Steel/ ABS	AC adapter - 6 VDC, 300 mA or 4-AA batteries

TABLE 1: LBI Product Matrix

## FCC NOTE

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Subpart J of Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his/her own expense.

## INSTALLATION

## PREPARATION

Any precision instrument requires a suitable environment in which to operate as intended. Please review each of the following prior to installation:

#### **Electrical Power**

The LBI indicators have been designed to operate from 4-AA alkaline/rechargeable batteries and ships with an AC adapter designed to operate from the local line voltage. The unit ships with the appropriate power plug for its area of intended use.

To avoid electrical noise interference and/or stray AC electrical transients, try to operate the indicator from a circuit separate from any equipment containing inductive devices such as a contactor coil, solenoid, relay coil, or motor. Be sure to use shielded cables for the load cell connections (ground shield wire at indicator) and run these cables away from your AC/DC power cables if possible.

In extreme cases, it may be necessary to install surge suppressors, line conditioners or even UPS (Uninterruptible Power Supplies) systems (not included).

#### **Environment**

- Avoid installing the indicator in areas of direct sunlight or high humidity
- Avoid sudden temperature change if this is unavoidable allow equipment to 'soak' at a constant temperature for at least three hours before use
- Ensure that steady, clean AC power is available to the unit

Remember that the installer is ultimately responsible to assure that a particular installation will be and remain safe and operable under the specific conditions encountered.

### CONNECTIONS

For the LBI model, the rear panel contains all connectors necessary to make the appropriate connections to the weigh platform, printer, remote display and power supply.

## **CONNECTING THE WEIGH PLATFORM**

The LBI ships with a 15 ft shielded load cell cable for connection to weigh platform's load cell(s) or junction box.

- 1. Plug the cable's 14-pin parallel interface connector into the load cell port on the rear panel of the indicator.
- 2. Wire the bare wires and shield to the weigh platform's load cell(s) or junction box using the color codes shown below.

4-wire cable		Optional 6	-wire cable
<u>Color</u>	Wire Name	<u>Color</u>	<u>Wire Name</u>
Red	+ Excitation	Red	+Excitation
Black - Excitation		Black	-Excitation
Green	+ Signal	Green	+Signal
White	- Signal	Yellow	- Signal
		Orange	+ Sense
		Brown	- Sense

## **CONNECTING THE SERIAL I/O DEVICE**

The model LBI comes standard with one full duplex RS232 serial port, designed for connection to a computer or a serial printer. The same port may be also used as a simplex, RS-232 port designed for connection to a remote display.

#### **DSUB9** Connector

Pin No.	Wire Name
2	RXD
3	TXD
5	Ground

## CONNECTING THE POWER SUPPLY

The LBI indicator ships standard with an external AC adapter.

1. Simply plug the AC adapter into the indicator's DC Power Jack first, and then plug into a standard wall outlet. *Make sure that the AC voltage appearing at the wall outlet matches the input voltage marked on the AC adapter.* 

## CONFIGURATION

## **OVERVIEW**

The indicator contains two main configuration menus:

- The Setup ("F") menu, which configures the indicator to your weigh platform
- The User ("A") menu, which configures the serial communication port and enables some user options

The Setup and User menus consist of several menu selections, each with its own sub-menu of selections or programming procedures. To configure the indicator you must first enter the appropriate menu mode. Once there, four of the front panel keys become directional navigators to move around in the menus, and one key is used to save or SET the selections.

## **ACCESSING THE MENUS**

To access the Setup ("F) menu:

- 1. Power off the indicator.
- 2. Press and hold the "SET" key for about three seconds while turning the unit back on. The display shows "F 1" to indicate that you are in Setup Menu mode.
- 3. Use the navigation keys shown in the below to move through the menu.

To access the User ("A) menu:

- 1. Enter the Setup ("F") menu.
- 2. Use the right or left directional keys shown above to move right or left in the Setup ("F") menu until the indicator shows " A 1".

## MENU STRUCTURE

All menus consist of a top level (heading) and a secondary level. The top level contains the code (e.g. F1) for the parameter to be configured. The secondary level contains the selection list or allows access to a programming sequence.

Use the directional keys to move around in the Menu Structure shown below.

- 1. To move to a new heading, use the TARE (left) or PRINT (right) key to move right or left in the Menu.
- 2. To move to the selection or programming level, press the ZERO (down) key once. The currently saved selection is shown.
- 3. To view the available selections for the current heading, use the TARE (left) or PRINT (right) key to move through the selection field.
- 4. To save a new selection, press the NET/GROSS (Set) key .To exit without saving, press the UNITS (up) key to return to the current heading.
- 5. Repeat Steps 2 through 5 until the Menu is programmed.

### **SETUP MENU DESCRIPTIONS**

This section provides more detailed descriptions of the selections found in the Setup Menu Chart. Factory-set defaults are shown in bold with a checkmark; (v).

CODE/NAME	DESCRIPTION	SELECTION LIST
F1 Graduations	Specifies number of full-scale graduations, i.e. capacity / division. Value should be consistent with legal regulations and environmental limits on the useful system resolution.	500 1,000 1,500 2,000 2,500 3,000 4,000 <b>5,000</b> √ 6,000 8,000 10,000 12,000 20,000 30,000 40,000 50,000
<b>F3</b> Zero Track Band	Selects the range within which the scale will automatically zero. Note that the scale must be in standstill to automatically zero. Selections are in display divisions (d).	0d <b>0.5d</b> √ 1d 3d 5d

**NOTES**: 1) Some selections are subject to local legal metrology regulations 2) Not shown is F25 which allows you to exit the Setup Menu without powering off the unit

CODE/NAME	DESCRIPTION	SELECTION LIST
<b>F4</b> Zero Range	Selects the range (expressed as a percentage of full scale capacity) within which the scale may be zeroed. Note that the indicator must be in standstill to zero the scale.	<b>100%</b> √ 1.9%
F5 Motion Band	Sets the level at which motion is detected. If motion is not detected, the scale can process a Print or Zero command. Maximum value varies depending on local regulations. Expressed as scale divisions per second (d/s).	<b>1d√</b> 3d 5d 10d
<b>F6</b> Digital Filter	Averages weight readings to produce higher stability. Choose the speed that works best for your application."FAST" = Fast"nnEd" = Medium"SLo" = Slow	FAST nnEd √ SLo
<b>F7</b> Overload Limit	Selects the desired formula which determines the point at which the indicator shows overload. All selections are based on the primary unit selected in F8. "FS" = Full scale capacity.	FS <b>FS + 2%</b> √ FS + 1d FS + 9d
<b>F8</b> Calib. Unit	Selects the primary base unit to be used in the calibration process. Also the default unit for normal operation. "1" = primary unit is lb. "2" = primary unit is in kg.	1√ 2
<b>F9</b> Display Divisions	Determines the desired weight increments. Value should be consistent with legal requirements.	1√ 2 5
<b>F10</b> Decimal Pt.	Determines location of the decimal point.	<b>0</b> √ 0.0 0.00 0.000 0.0000 00
<b>F16</b> Zero Calibration	Places indicator into the zero calibration routine. Scrolling down with the ZERO key one level begins the procedure.	Press <b>ZERO</b> key to begin sequence
<b>F17</b> Span Calibratio <b>n</b>	Places indicator into the span calibration routine. Scrolling down with the ZERO key one level begins the procedure.	Press <b>ZERO</b> key to begin sequence
F18 View Calibration	Actuates the function that allows you to view both the zero and span calibration value. The values displayed in this function are valid only after Calibration (F16 & F17) has been successfully completed. Scrolling down with the ZERO key one level begins the procedure. Multi-point cal	Press <b>ZERO</b> key to begin sequence
<b>F19</b> Key-in Zero	Allows you to key-in known zero calibration value in case of memory loss in the field. Scrolling down with the ZERO key one level begins the procedure.	Press <b>ZERO</b> key to begin sequence
<b>F20</b> Key-in Span	Allows you to key-in a known span calibration value in case of memory loss in the field. Scrolling down with the ZERO key one level begins the procedure.	Press <b>ZERO</b> key to begin sequence
F21 Factory Reset	This sub-menu will reset all parameters in the "F" and "A" menu to the default settings. USE WITH CAUTION!	Press the <b>ZERO</b> key twice to execute

## **USER MENU DESCRIPTIONS**

This section provides more detailed descriptions of the selections found in the User Menu Chart. Factory-set defaults are shown in bold with a checkmark ( $\sqrt{}$ ).

CODE/NAME	DESCRIPTION	SELECTION LIST
A1 Baud Rate	Selects the baud rate for data transmission through the serial port.	1200 2400 4800 <b>9600</b> √ 19200
<b>A2</b> Data Bits and Parity	Selects the number of data bits and parity of serial transmission. "8n" = 8 data bits with no parity bit and one stop bit "70" = 7 data bits with odd parity bit and one stop bit "7E" = 7 data bits with even parity bit and one stop bit "7n" = 7 data bits with no parity bit and two stop bits	<b>8n</b> √ 7O 7E 7n
<b>A3</b> Serial Port Mode	Selects when data will be sent out of the serial port to a printer or computer: "C" = Continuous mode; send data continuously "d" = Demand mode; send data when a PRINT command is issued from the printer, computer, or indicator.	C d√
<b>A4</b> Display Check	Actuates the function that illuminates all digit segments, decimal points, and LCD annunciators in a test sequence. Pressing the <b>ZERO</b> key to scroll down one level begins the test sequence.	Press <b>ZERO</b> key to begin sequence
<b>A5</b> Disable the Ib/kg Key	Allows the lb/kg key to be disabled so that an operator cannot accidentally press the key and change the displayed units.	0 1√
	"0" = Disable the lb/kg key "1" = Enable the lb/kg key	
<b>A6</b> Serial Port Mode	Selects the mode of the RS-232 serial port: Refer to Appendix B for more information. "0" = Full Duplex Mode "1" = Print Ticket Mode	0 1√
<b>A7</b> ID No. Enable	Allows the ID number to be disabled in the Print Ticket mode. Valid only when <b>A6</b> is set to "1". "0" = Disable the ID No. "1" = Enable the ID No.	<b>0</b> √ 1
<b>A8</b> ID No. Entry	Actuates the function that allows entry of a new ID No. Valid only when <b>A6</b> is set to "1". Pressing the <b>ZERO</b> key to scroll down one level begins the sequence.	0 – 199999 <b>123456</b> √
<b>A9</b> No. of Line Feeds	Actuates the function that allows entry of the desired number of line feeds to be printed in Print Ticket Mode. Valid only when <b>A6</b> is set to "1". Pressing the <b>ZERO</b> key to scroll down one level begins the sequence.	0 - 99 <b>8</b> √
<b>A10</b> Backlight Enable	Allows you to permanently disable the backlight feature for outdoor use. "0" = Always OFF "1" = Always ON "2" = automatic	0 1 <b>2</b> √

CODE/NAME	DESCRIPTION SELECTION LI		
<b>A12</b> Print Header	Tells MP-20 printer to print the header information. Valid only whenA6 is set to "1"."0" = Do NOT Print Header"1" = Print Header	<b>0</b> √ 1	
A13 Auto Power Off Period	Selects the auto off time period in minutes: "Off" = Disabled (Always ON)	Off√ 3 5 10 20 30	

## USER MENU PROCEDURES

This section provides instructions for all of the User Menu procedures.

#### ID Number Entry (A8)

- 1. While in the User Menu mode, scroll to "A 8", then scroll down once using the ZERO key to enter the ID Number menu.
- 2. The display will momentarily show "**ID NO**", followed by a value with one flashing digit. This value will be the current ID number value.
- Use the four directional keys (shown below) to adjust the displayed value to the actual ID Number value. Increase the flashing digit by pressing the UNITS key. Decrease the flashing digit by pressing the ZERO key. Pressing the PRINT key or the TARE key will change the position of the flashing digit.

4. After setting the exact value, press the NET/GROSS key to save the ID Number value. The display will show "SET" momentarily, and then revert back up to A8.

#### LF (Line Feeds) Number Entry (A9)

- 1. While in the User Menu mode, scroll to "A 9", and then scroll down once using the ZERO key to enter the Line Feeds menu.
- 2. The display will momentarily show "**LF**", followed by the current line feeds value.
- 3. Use the four directional keys shown in Figure 11 to adjust the displayed value to the actual line feeds value. Increase the flashing digit by pressing the UNITS key. Decrease the flashing digit by pressing the ZERO key. Pressing the PRINT key or the TARE key will change the position of the flashing digit.
- 4. After setting the exact value, press the NET/GROSS key to save the line feeds value. The display will show "SET" momentarily, and then revert back up to A9.

## **EXITING THE MENUS**

Exit any configuration menu by simply switching off the indicator or pressing the ZERO key while in F25.

# CALIBRATION

## CALIBRATION OVERVIEW

If your indicator was shipped as a complete scale, then calibration is not necessary. Please check with your installer or supplier if you are unsure. Load Cell Central recommends having your weighing equipment checked by a qualified scale technician at least once a year depending on its intended use and working environment.

The indicator requires two types of calibration: zero and span. Zero calibration (F16) requires the scale to be empty (nothing on scale) and the span calibration (F17) requires known test weights. After a successful calibration, you should record all calibration values in Table 2 using the F18 View Calibration procedure.

In the unlikely event that any calibration value is lost, the setup menu makes provisions for re-entering these values via F19 and F20; thus eliminating the need for re-calibration with test weights.

**NOTE:** This section assumes that the indicator is in Setup ("F") Menu mode. If the indicator is not in Setup Menu mode, refer to previous section for instructions.

## ZERO CALIBRATION (F16)

- 1. While in the Setup mode, scroll to "**F 16**", then scroll down once using the ZERO key to enter zero calibration menu. The display will momentarily show "**C 0**" followed by a value. This value is the internal A/D count and can prove useful when trying to troubleshoot setup problems.
- 2. After making sure that there are no test weights on the platform, press the ZERO key again to zero out the displayed value.
- 3. Press the NET/GROSS key to save the zero point value. The display will show "**EndC0**" momentarily, and then revert back up to F16. At this time, proceed to the F17 span calibration to complete indicator calibration.

## SPAN CALIBRATION (F17)

- 1. While in the Setup mode, scroll to "**F 17**", then scroll down once using the ZERO key to enter span calibration menu. The display will momentarily show "**C 1**" for the first span calibration point, followed by a value with one flashing digit. This value will be zero with the Decimal Point parameter selected in F10.
- 2. Place the first test weight on the weighing mechanism.
- 3. Use the four directional keys to adjust the displayed value to the actual test weight value. Increase the flashing digit by pressing the UNITS key. Decrease the flashing digit by pressing the ZERO key. Pressing the PRINT key or the TARE key will change the position of the flashing digit.
- 4. After entering the exact value, press the NET/GROSS key to save the value. If the C1 calibration was successful, the display will show "EndC1" momentarily, and then revert back up to F17..
- 5. At this time it is suggested that the calibration values be recorded for future use (see next section).

If the calibration was *not* successful, one of the error messages below will appear. Take the indicated action to correct the problem, and then perform a new calibration.

**"Err0**" - The calibration test weight or the keyed-in weight is larger than the full capacity of the scale. Change the calibration test weight or check the input data.

**"Err1"** - The calibration test weight or the keyed-in weight is smaller than 1% of the full capacity of the scale. Change the calibration test weight or check the input data.

"Err2" – There is not enough signal from the load cells to establish a proper calibration. Most commons causes include incorrect load cell wiring, a mechanical obstruction or a faulty load cell.

### VIEW CALIBRATION VALUES (F18)

- **Note:** The values displayed in this procedure are valid only after a successful calibration has been performed using F16 and F17.
- 1. While in the Setup mode, scroll to "**F 18**", then scroll down once using the ZERO key to enter View calibration menu.
- 2. The display will show the information listed in Table 2. The code will display briefly followed by the value. It is recommended that you record each value in the table below. Press any key to continue down the list. At the completion of the list, the indicator reverts back up to F18.

ZERO CALIBRATION VALUE (C0)	SPAN CALIBRATION VALUE (C1)

#### Table 2: Calibration Value Table

#### **KEY-IN ZERO CALIBRATION VALUE (F19)**

- **Note:** This procedure is intended for emergency use only in the case of non-volatile memory loss. A valid zero calibration value, obtained from a successful F16 calibration procedure, must be used.
- 1. While in the Setup mode, scroll to "F 19", and then scroll down once using the ZERO key. The display will momentarily show " CAL 0", followed by a value of zero
- 2. Use the four directional keys to enter in the actual zero calibration value.
- 3. After entering the exact value, press the NET/GROSS key to save the value. The display will show " **E CAL 0**" momentarily, and then revert back up to F19.

#### **KEY-IN SPAN CALIBRATION VALUE (F20)**

- **Note:** This procedure is intended for emergency use only in the case of non-volatile memory loss. Valid span calibration values, obtained from a successful F17 calibration procedure, must be used.
- 1. While in the Setup mode, scroll to "F 20", and then scroll down once using the ZERO key. The display will momentarily show "CAL 1", followed by a flashing zero.
- 2. Use the four directional keys to enter in the actual span calibration value
- 3. After setting the exact value, press the NET/GROSS key to save the value.
- 4. If the entered values are entered successfully, the display will show "E CAL 1" momentarily before reverting back up to F20.

# **OPERATION**

## DISPLAY

This model utilizes a 6-digit LCD (Liquid Crystal Display). Table 3 summarizes the display annunciators.

LCD Annunciator	MEANING
<b>→</b> 0 <b>←</b>	Better known as the "Center of Zero" annunciator, this light is active whenever the displayed weight is within $\pm$ 0.25 divisions of true zero.
Ν	Indicates that the indicator is displaying net weight.
G	Indicates that the indicator is displaying gross weight.
Т	Indicates that a tare weight has been established in the system.
lb, kg	Indicates the unit of the displayed weight.
	This light is on whenever the scale is stable.
4	Starts flashing when the battery voltage is too low for normal operation. See Appendix C for more information.

TABLE 3: @6=Annunciator Definitions

## **KEYBOARD**

The keyboard is composed of five function keys shown below.

#### FUNCTION KEYS

**Off** – This key switches off the indicator.

**Units** – This key toggles the indicator among the available weight units if enabled in the User ("A") menu. Available weight units include lb and kg.

Zero - This key sets the indicator to display zero provided the following conditions are met:

- 1. The indicator is displaying Gross weight.
- 2. The displayed weight is within the zero reset range that is programmed in F4 of the Setup ("F") Menu.
- 3. The scale is not in motion.
- 4. The scale is not in overload (see Appendix D for error codes).

**Net/Gross** - This key toggles the indicator between Gross weight and Net weight only if a Tare has been established.

Tare - This key is used to establish a Tare provided the following conditions are met:

- 1. The indicator is not at or below Gross zero.
- 2. The scale is not in motion.
- 3. The scale is not in overload (see Appendix D for error codes).

**On/Print** - This key is used switch the indicator on; it can also send weight information out to the serial port provided the following conditions are met:

- 1. The scale is not in motion.
- 2. The scale is not in overload (see Appendix D for error codes).

## **GENERAL SCALE OPERATION**

#### WEIGHING AN ITEM

- 1. Select the desired weighing unit by pressing the UNITS key until that unit is indicated on the display.
- 2. If necessary, press the ZERO key to obtain a weight reading of zero.
- 3. If weighing an item in a container, place the empty container on the scale's platter and, after allowing the weight indication to stabilize, press the TARE key. The display shows zero weight and turns the NET annunciator on
- 4. Place the object to be weighed on the scale's platter and allow the weight indication to stabilize. If the item weight exceeds the scale's weight capacity, it displays "oooooo".
- 5. Read the weight shown on the display. If you have established a tare, you may toggle between the gross weight and the net weight by pressing the NET/GROSS key

## **APPENDIX B: SERIAL PORT INFORMATION**

### **SERIAL PORT MODES**

#### DEMAND DUPLEX MODE

The Demand Duplex Mode (A3 = 'd', A6 = '0') provides a two way serial transmission mode In this mode, the output information is transmitted on demand; either by pressing the PRINT key on the indicator's front panel or upon receiving a recognized command from a host device (i.e. computer).

**NOTE**: Ensure that your cabling contains the proper handshaking.

#### CONTINUOUS DUPLEX MODE

The Continuous Duplex Mode (A3 = 'C', A6 = '0') provides a two-way serial transmission mode. In this mode, the output information is transmitted continuously making it a popular choice for remote displays and other remote devices requiring a constant data stream. The transmission automatically occurs at the end of each display update. The indicator will react upon receiving a recognized command from a host device.

RECOGNIZED HOST COMMANDS (applies to both demand and continuous duplex modes)

- "P" This command is sent to the indicator to print the indicated display. The indicator will <u>not</u> respond if the scale is in motion, positive overload or negative overload.
- "Z" This command is sent to the indicator to zero the scale. The indicator will <u>not</u> respond if the scale is in motion, positive overload or negative overload. The indicator will also not respond if it is not in gross mode or within the zero range specified in F4 of the Setup Menu.
- "T" This command is sent to the indicator to tare the scale. The indicator will <u>not</u> respond if the scale is in motion, positive overload or negative overload. The indicator will also not respond if it displaying a negative gross value.
- "G" This command is sent to the indicator to switch to gross mode. The indicator will <u>not</u> respond if the scale is in motion, positive overload or negative overload.
- "N" This command is sent to the indicator to revert to net. The indicator will <u>not</u> respond if the scale is in motion, positive overload or negative overload. The indicator will also not respond if a tare has yet to be established.
- "C" This command is sent to the indicator to toggle among the configured units of measure.

## **OUTPUT STRINGS**

### TEXT PRINT TICKET

The Text Print Ticket is designed specifically for a serial printer.

ID. NO.	123456
GROSS	25.00 lb
TARE	1.48 lb
NET	23.52 lb

#### NOTES:

- 1. The TARE and NET fields are not printed unless a tare has been established in the system.
- 2. The ID number field is not printed if it is disabled in A7 of the User Menu.

#### STRING FORMAT 1 (Condec Demand String)

String Format 1 is designed for two-way communication. Ensure that A3 is set to 'd' and A6 is set to '0'.

<stx></stx>	<pol></pol>	xxxxx.xx	<sp></sp>	<lb kg=""></lb>	<sp></sp>	<gr nt=""></gr>	<cr></cr>	<lf></lf>

# **APPENDIX C: DISPLAYED ERROR CODES**

CODE	MODE	MEANING / POSSIBLE SOLUTION				
	Normal Operating Mode	Gross Overload. A weight greater than the rated capacity has been appli to the scale. Remove the weight from the platter or try re-calibrating t scale. Otherwise, check for a bad load cell connection or possible load of damage due to overloading.				
Err 0	Span Calibration Mode (F17)	Keyed-in weight value is larger than full-scale capacity. Use a smaller weight or check keyed-in value.				
Err 1	Span Calibration Mode (F17)	Keyed-in weight value is less than 1% of full-scale capacity. Use a large test weight or check keyed-in value.				
Err 2	Span Calibration Mode (F17)	There is not enough load cell signal to produce the internal coun necessary to properly calibrate the scale. First check all load connection Use F16 mode to view internal counts.				
Err 3	All Modes	Non-volatile memory read error. One or more setup parameters have been lost.				
Err 4	All Modes	Non-volatile memory write error. Indicator needs service.				
Err 9	Normal Operating Mode	Span calibration value has been lost. Re-calibrate the scale.				
Slowly Flashing	Normal Operating Mode	Indicates that the battery voltage is becoming too low for normal operation. Batteries should be replaced soon.				
Quickly Flashing	Normal Operating Mode	Indicates that the battery voltage has become too low for normal operation Batteries should be replaced now.				
Flashes "bAtt"	Normal Operating Mode	Indicates that the battery voltage has become too low for normal operation; indicator will shut off automatically after 20 seconds. Batteries should be replaced now.
